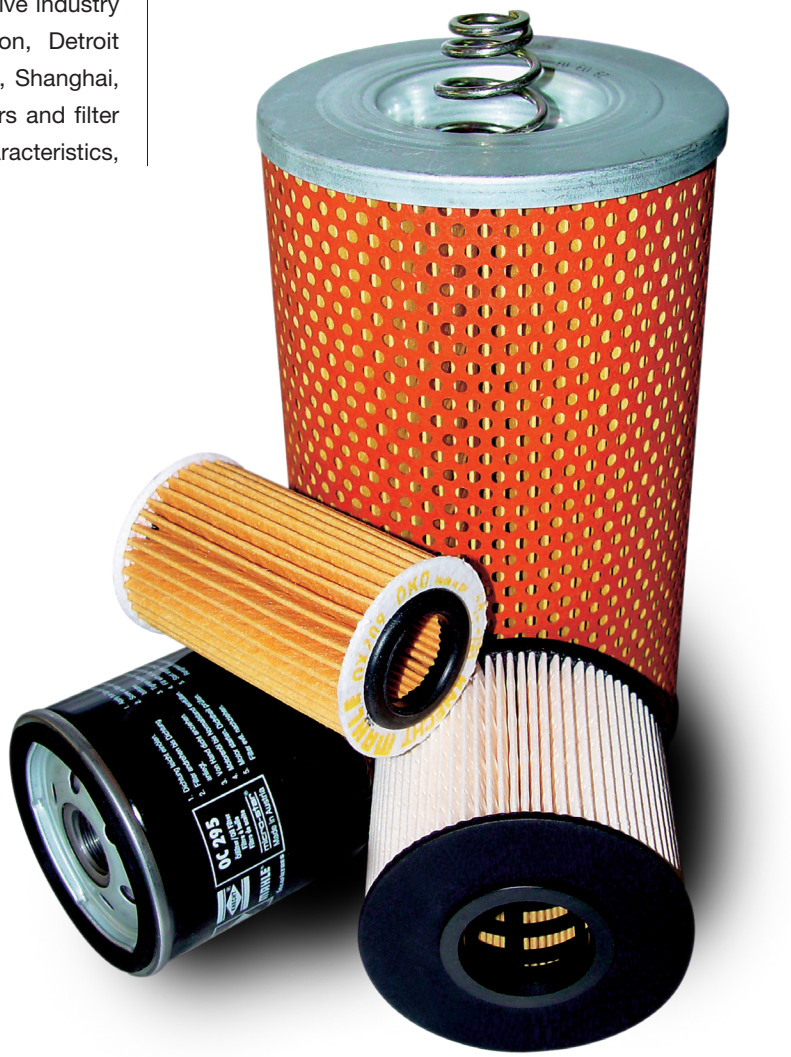
FILTERS HAVE A LONG TRADITION WITH US.

MAHLE – historically a developer of engine components – has recognized in good time how important optimally functioning filters are for the different circulations of service media. After all, every combustion is only as good as its upstream filters no matter, whether oil, fuel or intake air has to be cleaned. And because people only stay healthy when they breathe clean air, cabin air filters are another important part of our program.

MAHLE has a comprehensive program of filters for passenger cars, commercial vehicles, agricultural and construction machinery as well as motorbikes. As an innovative development partner of the automotive industry with R&D facilities in Stuttgart, Northampton, Detroit (Farmington Hills), Tokyo (Kawagoe, Okegawa), Shanghai, and São Paulo, (Jundiaí) we manufacture filters and filter systems that are optimally matched to engine characteristics, assembly conditions and applications. Our partners in trade and workshops benefit from this with filters in original equipment quality for oil, air, fuel, with ecologically-friendly filter cartridges, activated carbon canisters, air dryers, oil separators, hydraulic filters and cabin air filters, which can also be retrofitted for certain vehicles.



OIL FILTERS (OX / OC)

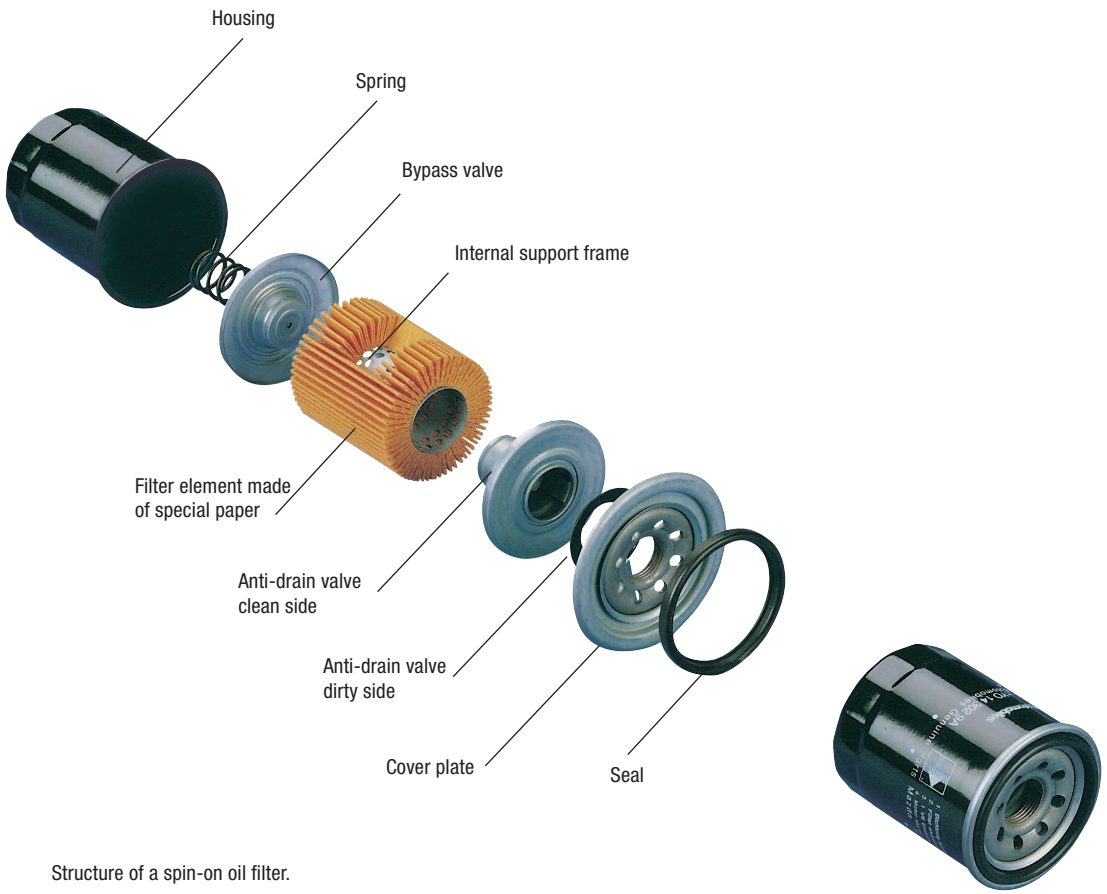
MAHLE oil filters reliably prevent dirt particles from entering the lubricant circuit and maintain oil quality as well as the performance and efficiency of the engine. Thanks to stable pleat geometry, cold start stability is assured.

SPIN-ON OIL FILTERS (OC)

Load peaks up to 20 bar are compensated due to the high pressure resistance of the housing. A pressure relief valve guarantees the oil supply under all conditions - for viscous oil as it is encountered during cold start or at low temperatures and also for strongly contaminated filter elements, when the replacement intervals have been exceeded. An anti-drain valve prevents the draining of the filter when the engine is switched off and secures fast oil supply when the engine is started.

OIL FILTER CARTRIDGES (OX)

With filter cartridges from the OX program we offer particularly economical solutions for workshops: instead of replacing the complete filter, only the dirty filter element has to be exchanged. The cartridges are metal-free and can therefore be incinerated completely.



Structure of a spin-on oil filter.

AIR FILTERS (LX)

Clean air intake is one of the most important conditions for optimal engine power, high torque, low fuel consumption and minimized pollutant emission. With MAHLE air filters up to 99.9% of dust, soot and tire wear particles are filtered out. At the same time, an optimal air/fuel mixture is assured. The high particle uptake capacity ensures long service life also under extreme conditions such as heat, cold or chemical influences.

Our quality filters prevent premature wear of the valves, cylinder work surfaces, piston rings, bearings and other engine components. To ensure perfect and lasting filter performance, all filters must be replaced within the replacement intervals stipulated by the car manufacturers.

In the passenger car sector, round and panel elements are fitted in air filter housings mounted to the engine or chassis and are stabilized with glue beads at the dirty side and support grids at the clean side, depending on the specifications of the car manufacturer. For dust-rich areas, an additional pre-cleaner in the form of a foam mat is placed at the dirty side. For higher surface loads, metal or plastic support studs are used.

In commercial vehicles, robust and at the same time low-weight air filter systems made from recyclable plastic are used that can also reduce air intake noises. In order to achieve a large filter surface at high stability, the filters are mostly cylindrical. To improve efficiency, radial sealing and axial supports are used. Additional safety inserts in the form of special fleece cylinders protect the clean side of the filter element during maintenance and replacements.

FUEL FILTERS (KC / KL / KX)

Modern fuel injection concepts require extremely clean, homogeneous and pulsation-free fuel supply. However, foreign particles can get into the fuel during the production and transport process and need to be filtered out. MAHLE fuel filters hold back foreign particles reliably.

Thanks to high-quality filter media, the fuel system is protected from the smallest dirt particles and therefore from corrosion damage. This safeguards the engine function and assures the efficient operation of the vehicle. The required constant fuel supply is achieved with pressure regulation and recirculation of the surplus fuel from the injection pump to the tank. Pulsation damping compensates for the pressure fluctuations caused by the fuel pump. Our fuel filters comply with the correspondingly high safety standards of the car manufacturers and ensure sealing tightness even in the event of accidents.

However, an important condition for correct functioning of the fuel filter is that filters are replaced within the maintenance intervals stipulated by the car manufacturers.

INLINE FUEL FILTERS (KL)

Inline fuel filters are mounted in line with the fuel line as the name indicates. They are made from steel sheet material with corrosion protection, stainless steel, aluminum or plastic. Optional functions such as pressure regulation, pre-heating, cooling and water separation are available.

FUEL FILTER CARTRIDGES (KX) AND SPIN-ON FILTERS (KC)

Fuel spin-on filters are designed for easy and fast replacement. Depending on their type, they are supplied with a thread to connect a water drain plug or water level sensor. For replaceable filter elements only the dirty filter cartridge is replaced. These filter elements are also available in a version that can be incinerated completely, easing the burden on the environment.

CABIN AIR FILTERS (LA / LAK)

Cabin air filters do a clean job. During only one hour driving, an air volume of up to 100,000 liters is blown into the vehicle interior. All the more important is regular change of filter elements. MAHLE recommends changing the cabin air filter every 15,000 km - however, at least once per year. Because, if the cabin air filter fails or when it is clogged up, the pollutant concentration in the interior of the vehicle can increase to six times of that of the outside air.

CABIN AIR FILTERS (LA)

MAHLE cabin air filters supply the driver and passengers reliably with cleaned air to breathe and safeguard their health, well-being and power of concentration of the driver even in the event of smog or high pollen count. They also reduce the load on the blower, protect heating and climate control from contaminations, improve air circulation and prevent dangerous misting up of the windows. In addition, the inside of the windows and fittings remain clean for longer.

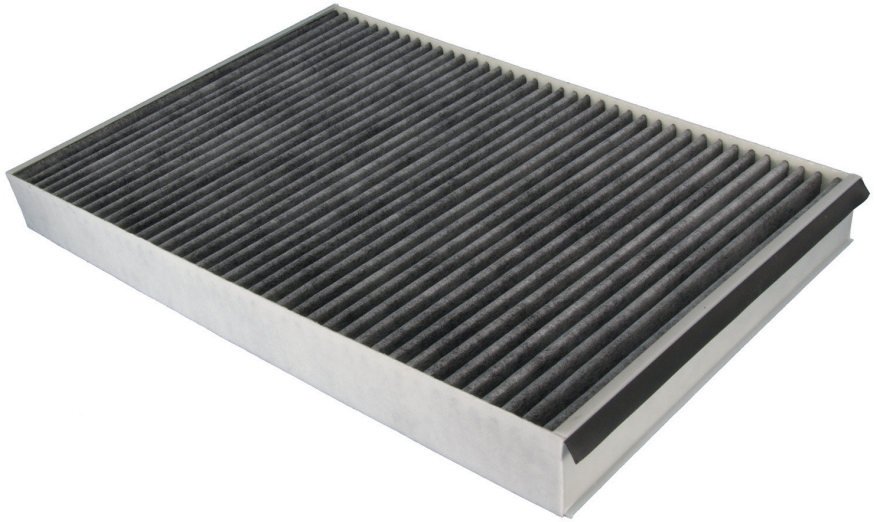
The pleat geometry of our cabin air filter elements is designed to provide a long service life. The low flow resistance minimizes the load on the blowers. Thanks to the accurate fit of the filter elements into the housings, bypass air is prevented.

Our cabin air filters do not produce harmful emissions, as solvent-free methods are used for their production such as ultrasound technology for welding.

CABIN AIR FILTERS WITH ACTIVATED CARBON (LAK)

Cabin air filters with activated carbon elements keep back harmful exhaust fumes, dirt and dust as well as high ozone concentrations and unpleasant smells. Their pleat bellows consist of three layers: an activated carbon layer is sandwiched between two layers of fleece. The filter layers are fused by means that glues or solvents are not used at all.

Depending on the vehicle type, activated carbon filters are also available that can be used instead of conventional cabin air filters.



CAREMETIX CABIN AIR FILTERS (LAO)

MAKES YOUR CAR A PROTECTED SPACE

Who's in the car needs clean air to ensure a safe environment in traffic – and to feel comfortable. The air we breathe is, however, often loaded with harmful and allergenic substances and odors, which conventional filters cannot eliminate. The solution: Our world first CareMetix® with 5-layers providing 5-fold protection.

ODOR FILTRATION YOU CAN EXPERIENCE

You breathe in, but smell nothing. CareMetix® eliminates odors. Traffic jams, tunnels, large construction sites, water treatment plants, and freshly fertilized fields—all these are sources of unpleasant, pungent ammonia and sulphur gases, which, until now, you have been exposed to in your car. The new CareMetix® cabin air filter provides protection through 5-layer technology—and removes precisely these unpleasant odors. And it works: not just in the laboratory, but also on the road—tried and tested in everyday conditions.

PROTECTION AGAINST POLLEN

Take a deep breath at last. CareMetix® protects against pollen and other allergens. Airborne pollen in the spring is a source of discomfort for more and more people—causing headaches, watery eyes, runny noses, and irritated skin. Protect yourself whenever you're in your car: with CareMetix®. The innovative cabin air filter with 5-layer technology providing 5-fold protection—even against allergens that conventional filters can't block out.

PROTECTION AGAINST SOOT AND FINE PARTICULATES

Your personal low-emission zone begins here. CareMetix® eliminates fine particulates, brake dust, ozone, and exhaust gases. Due to exhaust gases coming from the vehicle in front, the air at the center of the roadway is up to six times more polluted than at the side of the road. With the innovative CareMetix® cabin air filter, the vehicle cabin remains almost entirely free of fine particulates, tire debris, brake dust, and exhaust gases. The 5-layer technology also protects against micro-particulates and diesel soot—and preserves the sensitive components in the HVAC system from premature wear.

PROTECTION AGAINST MOLD

The invisible danger. CareMetix® protects against mold. Mildew and mold spores are everywhere—including in the air we breathe. They spread rapidly, particularly in wet and warm weather. That's why you need a cabin air filter that not only protects you against mildew and mold spores, but also prevents mold build-up on the filter itself. CareMetix®, with 5-layer technology, is fully effective against mold—and therefore makes an essential contribution to the well-being of all passengers.

PROTECTION AGAINST BACTERIA

Efficient against harmful micro-organisms. CareMetix® protects against bacteria. Some bacteria can make us ill. With its highly effective 5-layer technology, CareMetix® removes harmful micro-organisms and prevents them from spreading throughout the filter material, thanks to its anti-bacterial coating. The innovative filter thus protects the health of all passengers—in every season.

REMOVAL TOOLS

When changing a filter, it is not only important to have the right filter in the right quality, but also to have effective and simple mounting and dismantling procedures. For this purpose our program includes four removal tools which can be used for fast, easy mounting and dismantling of both the spin-on oil filters (OC) and also some oil filter elements (OX).

OCS 1 - Ø 76 MM

OCS 2 - Ø 76 MM / Ø 93 MM

OCS 3 - Ø 87 MM / Ø 76 MM

OCS 4 - Ø 65 MM
